Learning Style: On Demand

Technology: Cisco

Difficulty: Intermediate

Course Duration: 40 Hours

Implementing and Operating Cisco Enterprise Network Core Technologies (ENCOR) v1.4 - On Demand

About this course:

The Implementing and Operating Cisco Enterprise Network Core Technologies (ENCOR) v1.0 course gives you the knowledge and skills needed to configure, troubleshoot, and manage enterprise wired and wireless networks.

You'll also learn to implement security principles within an enterprise network and how to overlay network design by using solutions such as SD-Access and SD-WAN.

This course helps you prepare to take the Implementing Cisco Enterprise Network Core Technologies (350-401 ENCOR) exam, which is part of four new certifications:

- CCNP Enterprise
- CCIE Enterprise Infrastructure
- CCIE Enterprise Wireless
- Cisco Certified Specialist – Enterprise Core

Course Objective:

After taking this course, you should be able to:

- Illustrate the hierarchical network design model and architecture using the access, distribution, and core layers
- Compare and contrast hardware and software switching mechanisms and operation, while defining the ternary content addressable memory (TCAM) and CAM
- Troubleshoot Layer 2 connectivity using VLANs and trunking
- Implement redundant switched networks using Spanning Tree Protocol
- Describe the features, and path selection concepts of Enhanced Interior Gateway Routing Protocol (EIGRP)
- Implement and optimize Open Shortest Path First version 2 (OSPFv2) and OSPFv3
- Implement External Border Gateway Protocol (EBGP) interdomain routing, path selection, and single and dual-homed networking
- Implement internet connectivity within Enterprise using static and dynamic Network Address Translation (NAT)
- Implement overlay technologies such as Virtual Routing and Forwarding (VRF), Generic Routing Encapsulation (GRE), VPN, and Location Identifier Separation Protocol (LISP)
- Describe how APs communicate with WLCs to obtain software, configurations, and centralized management
- Configure and verify Extensible Authentication Protocol (EAP), WebAuth, and Pre-shared Key (PSK) wireless client authentication on a WLC
- Troubleshoot Enterprise networks using services such as Network Time Protocol (NTP), Simple Network Management Protocol (SNMP), Cisco IOS IP service level agreements (SLAs), NetFlow, and Cisco IOS Embedded Event Manager
- Implement scalable administration using Authentication, Authorization, and Accounting (AAA)
- Explain the purpose, function, features, and workflow of Cisco Digital Network Architecture (Cisco DNA) Center
- Describe the components and features of the Cisco SD-Access solution
- Define the components and features of Cisco SD-WAN solutions
- Describe the concepts and features of quality of service (QoS)
- Explain basic Python components and conditionals with script writing and

analysis
- Describe network programmability protocols such as Network Configuration Protocol (NETCONF) and Representational State Transfer Configuration Protocol (RESTCONF)

Audience:

- Mid-level network engineers
- Network administrators and support technicians
- Help desk technicians

Prerequisite:

Before taking this course, you should have the following knowledge and skills:

- How to implement Enterprise LAN networks
- Basic understanding of Enterprise routing and wireless connectivity
- Basic understanding of Python scripting

Course Outline:

- **Investigate the CAM**
- **Analyze Cisco Express Forwarding**
- **Troubleshoot VLAN and Trunk Issues**
- **Tuning Spanning Tree Protocol (STP) and Configuring Rapid Spanning Tree Protocol (RSTP)**
- **Configure Multiple Spanning Tree Protocol**
- **Troubleshoot EtherChannel**
- **Implement Multi-area OSPF**
- **Implement OSPF Tuning**
- **Apply OSPF Optimization**
- **Implement OSPFv3**
- **Configure and Verify Single-Homed EBGP**
- **Implementing Hot Standby Routing Protocol (HSRP)**
- **Configure Virtual Router Redundancy Protocol (VRRP)**
- **Implement NAT**
- **Configure and Verify Virtual Routing and Forwarding (VRF)**
- **Configure and Verify a Generic Routing Encapsulation (GRE) Tunnel**
- **Configure Static Virtual Tunnel Interface (VTI) Point-to-Point Tunnels**
- **Configure Wireless Client Authentication in a Centralized Deployment**
- **Troubleshoot Wireless Client Connectivity Issues**
- **Configure Syslog**
- **Configure and Verify Flexible NetFlow**
- **Configuring Cisco IOS Embedded Event Manager (EEM)**
- **Troubleshoot Connectivity and Analyze Traffic with Ping, Traceroute, and Debug**
- **Configure and Verify Cisco IP SLAs**
- **Configure Standard and Extended ACLs**
- **Configure Control Plane Policing**

- **Implement Local and Server-Based AAA**
- **Writing and Troubleshooting Python Scripts**
- **Explore JavaScript Object Notation (JSON) Objects and Scripts in Python**
- **Use NETCONF Via SSH**
- **Use RESTCONF with Cisco IOS XE Software**

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your Linkedin profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
